# Project OSCAR

- Designed / built OSCAR 1 – 4
- Air Force launch from Vandenberg  
Dec. 12<sup>th</sup> 1961 OSCAR 1 \* \* \* \* \* \* \*
- Setup a world wide monitoring network of Hams

570 Amateurs in 28 countries  
reported receiving OSCAR 1

# Satellites ?????? - The basics

➤ What makes something a satellite?

# Satellites ?????? - The basics

➤ Are all satellites in similar orbits?

# Satellites ?????? - The basics

- Are all satellites in similar orbits?

# Satellite Orbits

GPS satellites on inner  
Orbits, Geosynchronous  
satellites on outer rings.

This View is centered  
on San Jose CA

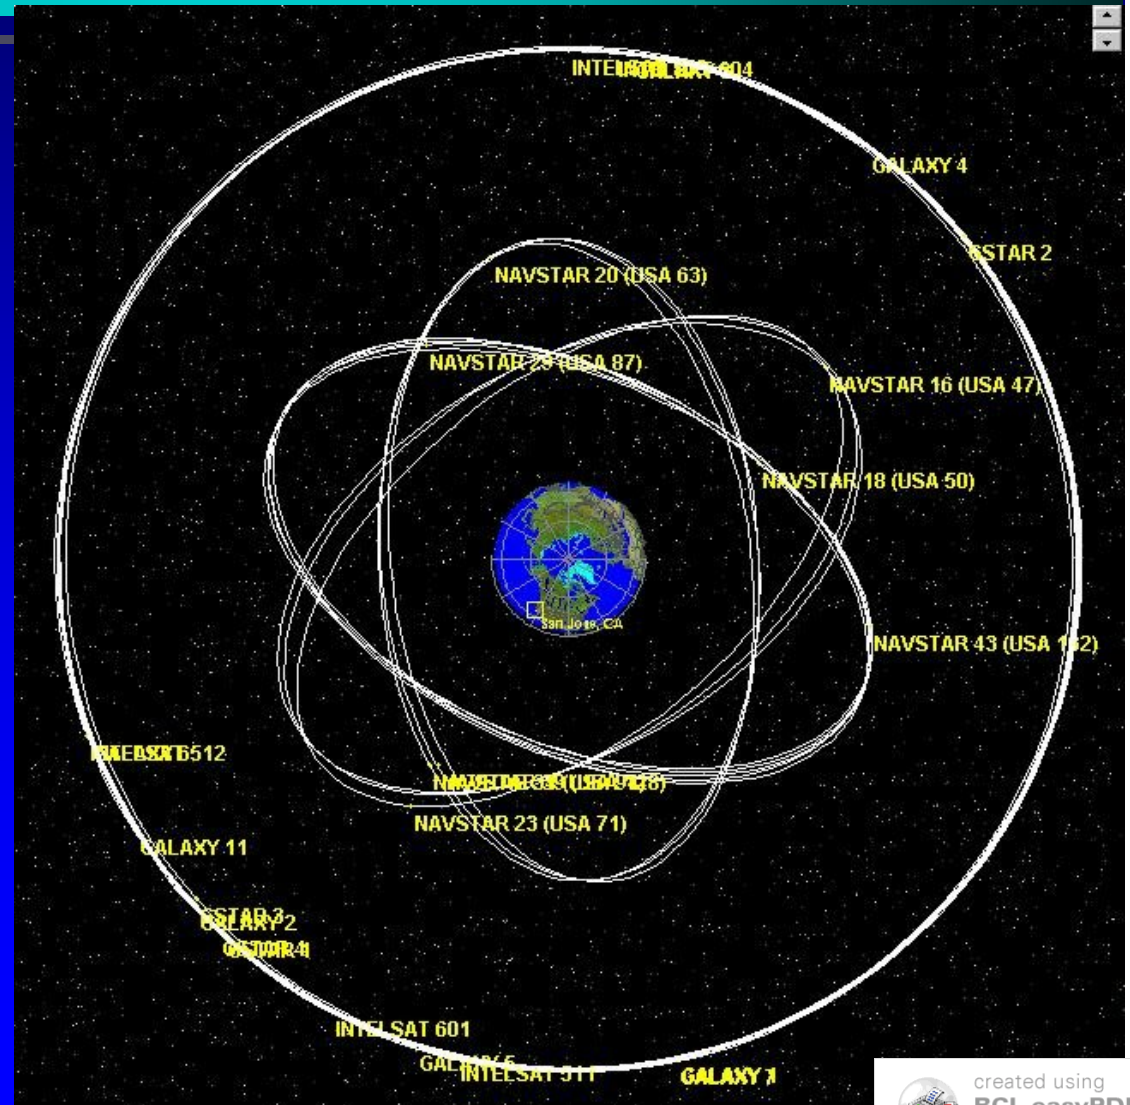

# Satellite Orbits

GPS satellites on Inner orbits with Geosynchronous satellites on outer rings.

This View is centered on The North Pole

GPS = 12,500 mi 8600 mph  
Geo = 22,200 mi 6855 mph

# Satellite Orbits

GPS,  
Geostationary,  
and Amateur  
satellites.

This View is  
centered on The  
North Pole

# Satellite Orbits

LEOs,  
Low Earth Orbit  
Amateur satellites.

This View is  
centered on North  
America

FO20  
LEO = 652 mi 16195mph  
ISS = 220 mi 17747mph

# Transmission Modes

## ➤ Analog SV's

➤ FM - AO27, AO-50, AO-51 & ISS

436.800 fm ↓ / 145.850 fm

➤ CW – AO-7, FO-29, VO-52

➤ SSB – AO-7, FO-29 & VO-52

435.860 usb ↓ / 145.950 lsb - inverted

## ➤ Digital SV's

➤ Packet (AFSK) / APRS

➤ PSK

# Tuning and Tracking

## ➤ Doppler Shift

- Measure the beacon

- Calculate based on band

  - VHF = +/- 3 khz UHF = +/- 9 khz

  - 2.4ghz = +/- 50 khz

## ➤ AZ-EL Antenna control

- Computer controlled

# How do we calculate doppler shift?

For light or other electromagnetic radiation, the prediction would be

$$f' / f = \frac{c}{(c + v)}$$

where  $c$  is the speed of light. This is the default Prediction when we assume that lightspeed is fixed in the observer's frame
